

## Juan Poema de Aldea En Cuarenta y Un Cuadros

Filesize: 7.83 MB

### ***Reviews***

*Completely among the finest ebook We have at any time read through. it was actually writtern really properly and helpful. You are going to like just how the writer compose this publication.  
(Mr. Deangelo Considine)*

## JUAN POEMA DE ALDEA EN CUARENTA Y UN CUADROS

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 78 pages. Original publisher: Washington, DC : Division of Fuel, Engineering, and Radiological Research, Office of Nuclear Regulatory Research, U. S. Nuclear Regulatory Commission, 2006. OCLC Number: (OCoLC)278894620 Subject: Nuclear power plants -- Equipment and supplies -- Risk assessment. Excerpt: . . . 1 Introduction The U. S. Nuclear Regulatory Commission ( NRC ) has supported the research program Proactive Materials Degradation Assessment ( PMDA ) ( USNRC 2007 ). The objective of this program has been to assess the possible occurrence of materials degradation and component degradation of light water reactors from the view of long-term operation such as would be relevant to relicensed plants. A central intent of the PMDA program has been to predict future occurrences of degradation that may or may not have been observed in the field or in the laboratory. Another objective is to consider the possibility of unexpected increases in degradation rates with time. The PMDA program has included an assessment, conducted under contract with Brookhaven National Laboratory, of past and possible future materials degradation in light water reactors. The study used the Phenomena Identification and Ranking Technique ( PIRT ) involving eight experts from five countries who first met to discuss the technical issues and then to perform individual assessments. The analyses focused on materials degradation modes associated with operating environments for specific components, such as stress corrosion cracking, fatigue, flow-accelerated corrosion, boric acid corrosion, thermal aging embrittlement and radiation effects for existing plants. The work encompassed passive components for which failure of the pressure boundary could lead to a release of radioactivity to the environment or would degrade the ability of safety systems to perform their intended functions. The study did not address design issues such as mechanics and...
